Sounds too familiar ?

Like you have been there, and  
done it ?

...Wish you could have a  
better day ?

FLIP OVER

## WELCOME TO OFSY

OFSY is an Online Office Management Software Suite designed to revolutionise and simplify your work processes, making office management surprisingly affordable and rewarding. OFSY offers a multitude of powerful tools to authorised users of an Enterprise. It enables an organisation's staff, and other external contacts such as Vendors and Consultants to have easy access to basic and critical information.

OFSY is a quality product developed by software and web solutions provider Davlin Software.

## SOFTWARE HIGHLIGHTS

- Quick installation
- Three flexible access options
- Configured to interface with external hardware devices
- Free software updates

## WHY USE OFSY?

To automate or not to automate? Advocates of automation justify it as a necessary Investment. Automation leads to a diversion of additional resources towards networking, infrastructure, upgrades and training at a very high cost. Not automating could mean losing out to competitors. What then is the solution?

## SOFTWARE SERVICE

OFSY, a web based, office automation suite consists of powerful modules. It allows authorised members of your organisation to communicate, enter, edit, and view business information online. Attractively priced on a per user/month basis, OFSY comes in five industry-specific packages.

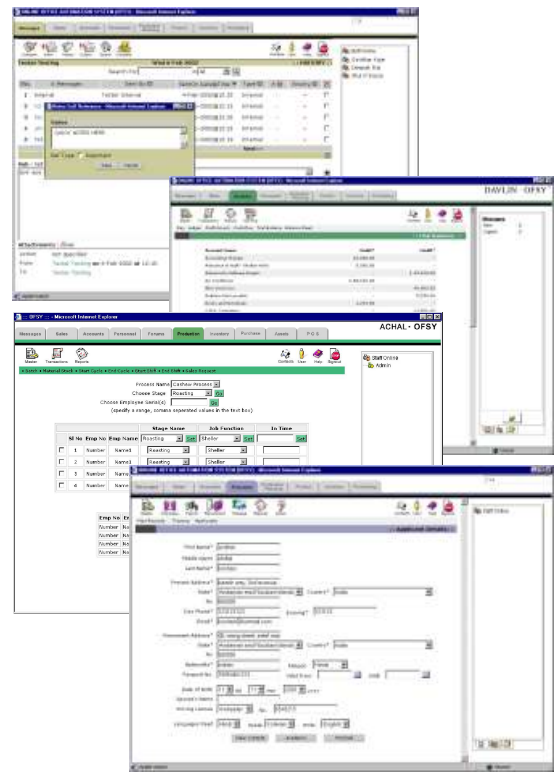

## CUSTOMIZED SOLUTIONS

OFSY is specifically designed to cater to the automation needs of different Industries.

Our pre-customised packages are designed for -

- Health Care Organisations
- Process Firms
- Educational Institutions
- Manufacturing Firms
- Banks and Financial Institutions
- Transport Companies
- Information Technology Firms
- Software Development Systems

Get in touch with our Representatives for a detailed information booklet on the package pertaining to your business.

Collaboration

Human Resources

Financial and Accounting System

Asset management

Document Management

Customer Relationship Management

- Sales Force Automation
- Support
- Billing

Supply Chain management

- Planning
- Production and Process Control
- Inventory
- Dispatch

Purchases

## TECHNICAL INFORMATION

OFSY adopts a J2EE-compliant, four-tier development architecture, which reflects changes instantly and allows organisations to be flexible.

## SECURITY

A unique login is not just what a user looks out for. Hence, OFSY adopts a secure server environment with additional features -

- Uses firewalls & advanced technology to prevent interference by intruders.
- A Multi-security system increases security levels between layers.
- View event logs stored by the system.
- Monitors a user's access rights.

## HOW CAN YOU ACCESS OFSY?

OFSY users require an operating system installed with Java and Flash enabled browsers. It offers three interesting access options.

**OPTION 1** Protected by firewalls, OFSY is hosted at a data centre. Each time you access it, your data is encrypted, ensuring safe transit to the database server.

**OPTION 2** OFSY is individually deployed as part of your internal corporate network.

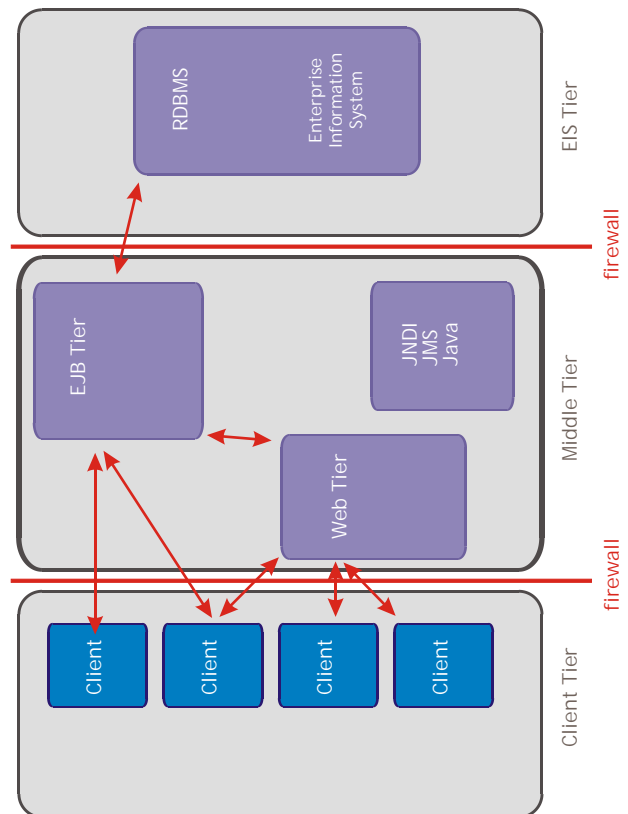

**OPTION 3** A combination access plan of hosting the database server/ the application server on your internal network.

## BENEFITS

- Deploy software automation quickly and inexpensively.
- Access OFSY from anywhere, anytime.
- All OFSY upgrades will be automatically reflected free of cost.
- Convert huge capital costs into predictable fees, spread over a multi-year contract.
- Invest on human resources and capital to build your core service, not your IT Infrastructure.
- OFSY is charged on a per user basis.
- The number of users can be scaled up or down on a monthly or yearly basis, offering financial flexibility and accessibility control.
- Choose the software modules that your business requires
- Relieve overburdened and under-resourced IT staff.
- OFSY offers flexible communication both within and outside your organisation
- Excellent support infrastructure and a 24hour help desk

In today's challenging corporate climate, OFSY, the Complete Suite for Online Office Automation helps you stay focused on your core business activities.

## J2EE ENVIRONMENT

Based on the J2EE architecture specification by Sun Microsystems, OFSY is designed as a distributed multitier application that separates the various functions of the system. The client tier is designed to provide the user interface to the client which is customizable as per the requirements of the client. The middle tier manages the client services and the business logic for the application using the Enterprise Java Beans™ (EJB™) technology.

The data storage support is provided by the EIS tier (Enterprise Information System tier) which is capable of connecting to various databases. The advantage of having multiple tiers is that different components of the system can run on different devices, thereby increasing the reliability and scalability. The complete system is protected by corporate firewalls which run both inside and outside the system.

In general, this system is reliable, scalable and provides complete security which are the key components for today's enterprise applications.
